

PDF FlipFlow: Your Intelligent Reading Assistant

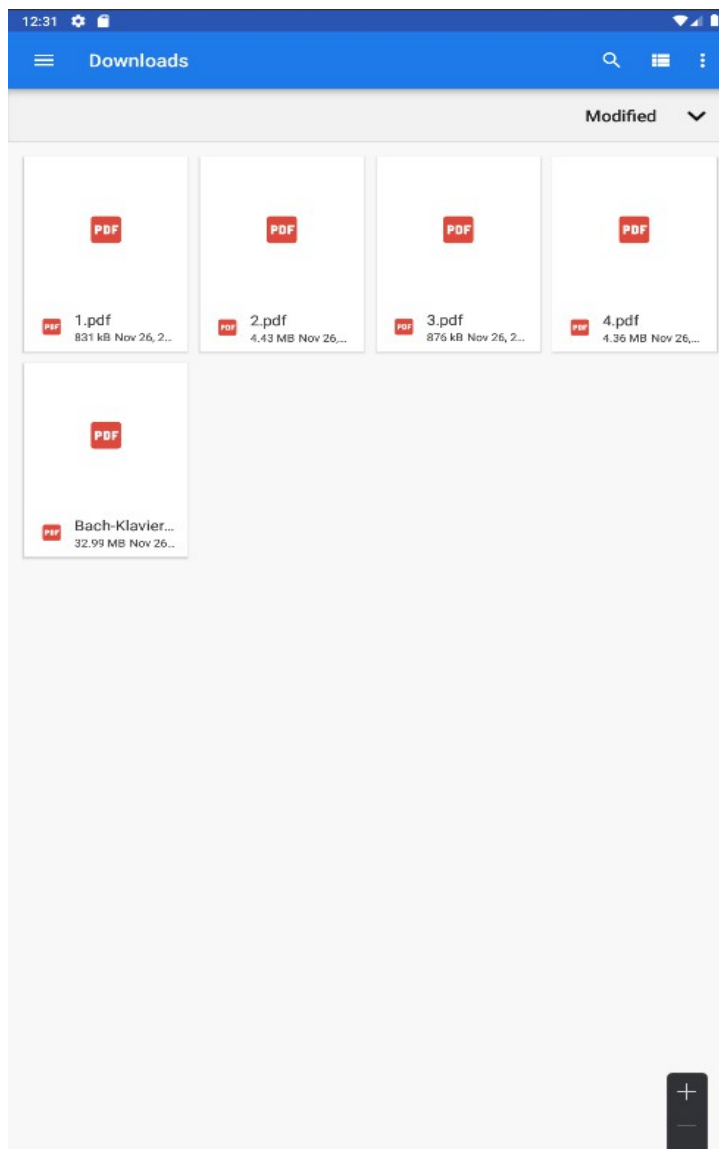

Automatic, hands-free page turning for musicians, speakers, and accessible reading.

The app's user interface is clearly structured and offers quick access to the main functions:

Button 1 – Select PDF File

Use this function as a classic, simple PDF document reader to quickly and easily open and read a single file manually.

Button 2 – Select Folder

Here you can open a folder containing several separate PDF files. The program reads the folder and displays exactly how many PDF documents are inside. You can open these files and have them flip automatically one after the other.

- **Interval:** Determine the page-turning speed by entering a value in milliseconds.
- **Delay:** Set a pause (start delay) before the program begins the automatic sequence.

12:32

Anzahl der in Ordner gefundenen Dateien: 5

Starten

Start-Verzögerung in Millisekunden:
5000

Intervall in Millisekunden:
1000

Gehe zu Seite: 1

+
-

As soon as the automatic sequence starts, additional control buttons (**START**, **STOP**, as well as forward and backward arrows) appear at the bottom, allowing you to control the process at any time.

Integrated Note Function (Top Menu Bar):

Using the upper buttons, you can make handwritten annotations directly on the document, erase them, and save your changes.

CAUTION: The "**Delete**" button completely clears the integrated database, including all saved notes, irreversibly! If you only want to remove notes from a single page, use the **Eraser tool (Erase)** instead and click **Save** afterward.

This mode is ideal for teachers conducting one-on-one lessons with students, as well as for working with collections of separate PDF documents organized in a shared folder.

Button 3 – Select Multi-page Document

This function is based on the exact same logic as Button 2, with one key difference: Instead of handling multiple individual PDF files in a folder, it processes and automatically turns pages for a single, continuous, multi-page PDF document.

Button 4 – Reading Assistant

This button takes you to the program interface where you can precisely program your automatic page-turning. When you open a multi-page PDF document, the sequence for each individual page can be set with a

customized interval in milliseconds. Via the menu, you can **save**, **play**, or **delete** your created flow plan.

To make the most of this mode, the integrated **Flow Planner** is here to help:

The Flow Planner determines exactly how many milliseconds you need to read or play a page before it should turn automatically. It offers two intuitive methods for this:

1. **Automatic Measurement:** As soon as you click "Start Counter", the program waits until you begin reading aloud or playing music. At the end, the program automatically calculates the perfect result in milliseconds for you.
2. **Manual Measurement:** Determine your required time flexibly via a manual button press (Stop).
